

The mission of Rocky Mountain OPTI is to exceed the highest standards of excellence for osteopathic postgraduate training.

BRC Building Research Capacity
The building blocks of primary care research

All family medicine departments and residency programs seek to build or sustain their research and scholarship capacity.

A partnership between the Association of Departments of Family Medicine (ADFM) and the North American Primary Care Research Group (NAPCRG) has created a program to help you do just that.

The [Building Research Capacity \(BRC\) program](#) provides opportunities for family medicine departments and residency programs to engage in a mutually beneficial learning community to leverage their strengths and resources for building research capacity.

BRC has three components:

- **Curriculum** – The BRC curriculum is aimed at helping departments and residency programs begin to put building blocks in place for growing research capacity.
- **Brief Consultation** – Experienced research leaders provide brief consultations on research and scholarship capacity building.
- **Extended Consultation** – A two-year extended consultation service at the institutional level (available on a limited basis).

If your department or program has been wondering how to get primary care research started at your institution or sustain what you've already built, the BRC program is for you.

For more information, [click here](#) or contact Hannah Bruins at hbruins@NAPCRG.org.
