

The mission of Rocky Mountain OPTI
is to exceed the highest standards of
excellence for osteopathic
postgraduate training.

RMOPTI Research & Faculty Development E-Bulletin

Volume 2, Issue 6

09/01/2016

Dear DMEs and Program Directors,

Please see the upcoming webinar series below by the AODME on scholarly activity/research.

AODME Webinars: Osteopathic Research: A How To Guide, Parts 1 and 2.

Wednesday, September 7 and 14 - at 4 p.m. ET

Presented by: Kimberly Wolf, D.O., Co-Program Director of Dual Pediatrics Residency Program and Assistant Professor of Pediatrics, Nationwide Children's Hospital/Ohio State University, Columbus, OH

Evidence-based medicine has become the cornerstone of medicine for the future. Osteopathic evidence-based medicine has historically been lacking. As we move towards the single-GME accreditation system, the need for scholarly activity, including osteopathic research, is becoming more apparent. In this two-part webinar series, Dr. Wolf will provide an introduction to osteopathic research to help guide your programs through this process. In the first presentation, we will cover the current state of osteopathic research and review the need for a stronger osteopathic physician presence in creating the evidence that shapes our policies and patient care. The second presentation will delve deeper into how to successfully complete an osteopathic research project. Through this webinar, one will not only gain perspective on the need

for evidence in our field, but also be provided the tools to help make this happen.

Presentation Objectives:

Part 1: September 7, 2016

1. Review the role of EBM in medicine today, and the deficit of osteopathic research that exists
2. Address challenges that exist to conducting strong osteopathic research
3. Review basic study types and research designs

[Click Here to Register for Part 1](#)

Part 2: September 14, 2016

1. Discuss current osteopathic evidence-based resources
2. Review sources of funding for research, especially with osteopathic focus
3. Brainstorm ideas for future osteopathic research

Kimberly Wolf, DO, is the newly appointed co-program director of the dually-accredited Pediatric Residency Program at Nationwide Children's Hospital in Columbus, Ohio. She completed her osteopathic medical education at the College of Osteopathic Medicine of the Pacific in Pomona, California, and her Pediatrics Residency at Nationwide Children's Hospital in Ohio.

Dr. Wolf is actively involved in both osteopathic undergraduate and graduate medical education. She is a practicing general pediatrician, and 80% of her clinical time is now spent running a pediatric OMT clinic.

Dr. Wolf is actively involved in osteopathic research through her program and clinic. She had a case study published in the March 2016 JAOA -"Concussions and Osteopathic Manipulative Treatment: An Adolescent Case Presentation." Other ongoing research studies in her practice include work with concussions, asthma, feeding dysfunction in neonates, and the usage of OMT in her practice. In April 2016, she was invited to give a presentation on Osteopathic Scholarly

Activity at the Ohio Osteopathic Symposium. She is passionate about strengthening OMT's presence in the evidence-based medicine community.
